

VEDBUS Backend Auth Documentation & Guide

Generated on: 29/9/2026

1. File Summary & Overview

This document explains the authentication architecture, security fixes, and the Postman collection JSON file created for testing the VEDBUS backend.

2. Postman Collection JSON (vedbus_auth_postman_collection.json)

File Location: BACKEND/vedbus_auth_postman_collection.json

- **POST /api/auth/register**

Registers a new user with name, email, phone, and password. Hashes password securely via bcrypt and returns access token (15m) & refresh token (7d).

- **POST /api/auth/login**

Authenticates user email/password. Validates credentials and returns fresh accessToken and refreshToken.

- **POST /api/auth/refresh**

Accepts a valid 7-day refreshToken and returns a new 15-minute accessToken without re-prompting for password.

- **POST /api/auth/logout**

Signals client to clear stored tokens locally to end session safely.

3. Backend Security & Auth Handler Updates (src/routes/auth.ts)

- Dual Token Architecture: Short-lived Access Token (15m) + Long-lived Refresh Token (7d).
- Rate Limiting: Max 20 requests per 15 minutes per IP on /api/auth to prevent brute-force attacks.
- Admin Middleware (isAdmin): Restricted administrative write operations (e.g., POST /api/buses).
- Guest Fallback Removal: Removed automatic fallback to random DB users in bookings and packages.
- UUID Primary Keys: Replaced timestamp-based IDs with crypto.randomUUID() for collision resistance.
- HTTP Security Headers: Integrated Helmet middleware in server.ts.

4. Detailed Explanation in Hinglish

- **Ye file kya hai?**

Ye ek Postman Collection JSON file hai jisme naye Auth APIs (Login, Register, Refresh, Logout) ki ready-made testing setup di gayi hai.

- **Kyu banayi gayi?**

Taki aapko Postman me manually URLs, Headers, ya JSON Body type na karni pade. Direct import karke 1-click test kar sakte hain.

- **Kaise use karein?**

Postman me Import -> File Select karo (vedbus_auth_postman_collection.json). Terminal me npm run dev chalao, aur Send daba kar testing shuru karo.
